EDUCATION

2021 - 2024 Bachelor of **Management Information System** at UNIVERSITY OF ECONOMICS HO CHI MINH CITY (UEH) - **GPA: 3.73/4.0**

SKILLS

BI tools	Build dashboards in Power BI , Looker and Metabase to track performance
Database	Acquainted with PostgreSQL and MSSQL Server , capable of advanced SQL query
Python	Proficient in Python for data analysis and transformation , basics for AI and ML
SpreadSheet	Possess advanced abilities in Google Sheets and Excel
ETL / ELT	Foundational knowledge of tools like Airflow , Dagster , supporting data transformation workflows
Cloud Service	Introductory knowledge of AWS web services (S3, RDS,EC2) and GCP
Control version	Familiar with Git

EXPERIENCE

Data Engineer: ANOVA - Ecommerce Seller on Amazon 06/2024 - 03/2025

Preprocessing Data in PostgreSQL

- Prepared and cleaned large datasets (8–10 million records), ensuring data consistency before loading into BI tools.
- Optimized PostgreSQL queries using indexes and materialized views, reducing execution time by 60%.
- Automated data pushes to Google Sheets using GSpread library, reducing manual processing time by 50%.

Competitor Tracking API

- Built data pipelines to ingest competitor pricing and promotion data from external APIs (Helium, Jungle Scout).
- Designed data models enabling continuous tracking and competitive intelligence.
- Delivered structured datasets powering analytics and decision-making systems after tranformation by DBT

Sales Performance Data

- Utilized advanced SQL techniques, including CTEs and window functions, to efficiently process and extract data.
- Optimized queries for performance and high-frequency updates by somes technique like indedxing, create a views.
- Built a dedicated KPI Management Module to measure sales metrics (revenue, ads spend, ACOS, TACOS, CR...).

Data Analyst / Engineer: ShopeePay - Digital Wallet 04/2025 - Now

Automation Task

- Automate daily data pipelines to refresh activation users, orders, and user patterns across platforms.
- Developed a Looker dashboard to monitor daily traffic performance, enabling to track trends and optimize plans.
- Implemented a performance tracking module to monitor product user activation.

Bot Alert

- Built a bot to send user lists to operations teams for CS/CX survey setup.
- Implemented voucher usage alerts via chat platform APIs, notifying teams when quota thresholds are reached.

Data Analysis

- Applied customer segmentation to analyze purchasing behavior and target vouchers, driving a 10% increase in orders.
- Conducted data analysis and executed A/B testing on new features to increase 15% user traffic.
- Identified user journey bottlenecks through data and recommended improvements to enhance user experience.
